GERMAN TRANSPORT PLAYER SHORT-TERM LINEHAUL EFFICIENCY

Modeling & Scenarios

A digital twin of current national linehaul operations was set up in OPTANO to identify inefficiencies in the current setup.

Scenario Evaluation

Different scenarios evaluated pre-defined vehicle round trips for lower transport rates as well as capacity consolidation from optimized volume routing.

Network Optimization

Fragmented routings were consolidated into dedicated transport tours, reducing external carrier dependency and transport costs.

SPECIAL OFFER: TALK TO AN EXPERT

Book a free 30-minute expert session by using the QR code.

Talk to one of our experts.

Identify optimization potential in your network.

Discover the strategic value mathematical optimization can unlock for your use case.

Schedule a session with our experts and receive a clear assessment of feasibility, impact, and economic viability.
